Wenxuan Wang

Working on AI Agents
wangwenxuan@pjlab.org.cn · Website · GitHub · Google Scholar

Summary

Joint Ph.D. student at Harbin Institute of Technology and Shanghai AI Laboratory, working on AI agents.

Education

Harbin Institute of Technology Aug 2026 – present
Ph.D. Student, Faculty of Computing
Joint training with Shanghai AI Laboratory and HIT-SCIR. Advisors: Yu Cheng and Weinan Zhang.

Harbin Institute of Technology Aug 2022 – June 2026
Bachelor's, Artificial Intelligence, School of Future Technology

Research & Publications

Internalizing Agent Experience into Diffusion Model Weights via On-Policy Context Distillation
First author · arXiv preprint, 2026 · Paper · Code
- Introduced D-OPCD to distill agent-refined prompts into diffusion model weights, retaining agent benefits when generating directly from the original query.
- Raised the average direct-generation score from **60.52 to 65.09 across four benchmarks**. A second skill-evolution round added **1.83 points** over a skill-free harness on the updated generator.

SubtleMemory: A Benchmark for Fine-Grained Relational Memory Discrimination in Long-Horizon AI Agents
First author · Findings of EMNLP 2026 · Paper · Code
- Introduced a benchmark testing whether long-horizon agents distinguish complementary, nuanced, and contradictory relations among memories embedded in user-agent histories.
- Built **1,522 evaluation instances over 10 long histories**, with diagnostic protocols separating failures in memory preservation, retrieval, and downstream reasoning.

Agent Planning Benchmark: A Diagnostic Framework for Planning Capabilities in LLM Agents
Second author · Findings of EMNLP 2026 · Paper · Code
- Co-authored a planning-specific diagnostic benchmark with **4,209 multimodal cases across 22 domains and five settings**, separating planning quality from execution outcomes.
- Evaluated **12 multimodal LLMs** on planning and tool-related robustness; validated APB-guided refinement on **200 ToolSandbox and 200 tau-squared-bench tasks**.

Selected Projects

Multi-Agent Social Media Simulation Sandbox Sept 2024 – Jan 2025
- Contributed to a multi-agent simulation system modeling social media interactions, including following, liking, reposting, commenting, and posting.
- Improved structured output extraction and simulation performance to support more efficient simulation workflows.
- Implemented persistent logging and developed custom tools to support system operation and analysis of agent behavior.

Autonomous Social Media Agent System Mar 2025 – May 2025
- Developed the central control module for a social media agent system exploring autonomous behavior and influence in online interactions.
- Supported system operation, testing, and iterative refinement in a real-world social media environment.

Internship Experience

Shanghai AI Laboratory · Intern Oct 2025 – Oct 2026

Honors & Awards

Outstanding Graduate May 2026

Song Qingling Grant Mar 2026

Second Prize, ASC Student Supercomputer Challenge May 2025

Samsung Scholarship Mar 2025

Song Qingling Grant Mar 2025

First Prize, National College Student Mathematics Competition (Heilongjiang Division) Nov 2023
